OmniPacs™: “Anytime, Anywhere”—The Future of Transactional Radiology

New York, NY March 23, 2009—OmniPacs Inc., a subsidiary of Zen Engineering Network, introduces OmniPacs™, a multi-service online imaging network. Harnessing the power of “Cloud Computing” OmniPacs™ empowers licensed professionals to read and diagnosis imaging studies “anytime, anywhere.” With an FDA approved subscription-based model and full suite of diagnostic imaging components (which support all DICOM modality formats, including MRI, CT, X-ray, Ultra Sound, and Mammography), OmniPacs™ enables both private enterprises (B2B) and entrepreneurial professionals (B2C) to share imaging data in a cost effective, technologically efficient, and privacy protected manner.

Overflow reading services have proliferated over the past five years; OmniPacs Inc. has grown in tandem, creating a synergy of several distinct industries and combining the best of breed in Internet technologies. As the premier provider of web-based picture archiving and communication systems, the OmniPacs™ platform builds an open forum and community for information and knowledge exchange. This has given a new market sector of independent consultants the ability to service a multitude of clients in various locations, in real time.

Supplying the tools necessary, OmniPacs™ offers a variety of subscription packages to suit the needs of all users and institutions, large or small. OmniPacs™ furnishes access to virtual sharing, encourages compliance with HIPPA guidelines, and connects people in a new intuitive, instant and secure way.
