

Biometric Fingerprint Technology

DECREASE FRAUD AND INCREASE ACCOUNTABILITY

Biometric fingerprint readers supply a cost-effective approach for addressing payroll theft, while increasing point of sale security. These devices enable retailers to dramatically reduce time and attendance fraud, promote adherence to corporate policies for voids and overrides, and simplify compliance with company regulations.

Celerant has integrated biometric fingerprint technology within the Command Retail system, creating a work environment that emphasizes accountability and productivity. In using the fingerprint readers, distributed by Digital Persona, retailers are able to have a secure perspective of their businesses, allowing them to run their operations confidently and efficiently.

"The biometric fingerprint readers are great and work as advertised, durable, and way faster than regular login. They make the automatic log off feature practical in a fast paced environment."

- Tal Mentesh, TYM Technology Solution, Retail Technology Consultant

BENEFITS

- Prevent "buddy punching" aka payroll theft
- Reduce shrink at the POS
- Prevent unauthorized overrides
- Eliminate password resets
- Support faster workflow
- Increase employee accountability
- Simplify compliance with PCI requirements

"Six months ago, we implemented our biometric fingerprint reader at every register in all of our stores and it has proven to be a phenomenal tool. It has given us more control over employee activity and enables us to audit every sale by sales person. The fingerprint reader has been a real timesaver at the register and works very well with Celerant. It works flawlessly to tie our employees to each sale, ensuring that every discount, return, and gift card transaction is accounted for. In the future we also plan to use it beyond the point of sale to easily track staff schedules as well."

- Steve Patten, Director of IT for The Alpine Shop
